

Rizart Belshaku

Date of birth: 17/08/2003 | **Nationality:** Albanian | **Phone number:** (+355) 692932128 (Work) |

Email address: rizartbelshaku2@gmail.com | **Website:** <https://github.com/rizartbelshaku> |

LinkedIn: <https://www.linkedin.com/in/rizart-belshaku/> |

Address: Lagjja "5 Maji", 1001, Tirane, Albania (Home)

WORK EXPERIENCE

FRONTEND DEVELOPER – BIZ360 – 01/04/2026 – Current – TIRANE, ALBANIA

- Web and mobile development using **React.js** and **React Native**, building responsive interfaces and scalable component structures with **TypeScript**, **Redux/Context API**, **React Hooks**, and modern UI frameworks (**Material UI**, **Tailwind CSS**).
- Experience integrating **REST and GraphQL APIs** with **Axios/Fetch**, applying best practices for authentication, error handling, caching, and real-time data updates.

FRONTEND DEVELOPER – A-T-D ALBANIA TECHNOLOGY DISTRIBUTION – 24/03/2024 – 31/03/2026 – TIRANA, ALBANIA

- Web and mobile development using **React.js** and **React Native**, building responsive interfaces and scalable component structures with **TypeScript**, **Redux/Context API**, **React Hooks**, and modern UI frameworks (**Material UI**, **Tailwind CSS**).
- Experience integrating **REST and GraphQL APIs** with **Axios/Fetch**, applying best practices for authentication, error handling, caching, and real-time data updates.
- Solid knowledge on version control with **Git**, and task management with **Jira/Confluence**.
- Strong development workflow using **npm**, **modern build pipelines**, **Webpack/Vite**, **ESLint + Prettier configurations**, code reviews, and Git branching strategies.
- Familiar with **Vue 3** and **Vuetify** for UI development (secondary stack), using **Composition API**, **TypeScript**, **reusable components**, and reactive patterns (**computed**, **watch**, **watchEffect**).

IT SUPPORT SPECIALIST INTERNSHIP – BALFIN GROUP – 01/12/2023 – Current – TIRANA, ALBANIA

- managing IT networks
- installing software and operating systems on client PCs
- troubleshooting IT-related issues
- providing support to end-users within the company

INTERNATIONAL VIRTUAL INTERNSHIP – VODAFONE – 10/04/2023 – 10/06/2023 – TIRANA, ALBANIA

- 5G
- Agile way of working
- IT Infrastructure
- Big data & Security
- Digital Architecture
- Cloud Technologies

EDUCATION AND TRAINING

01/11/2025 – CURRENT

MASTER OF SCIENCE IN INFORMATION TECHNOLOGY European University of Tirana

Field of study Information and Communication Technologies

Website <https://uet.edu.al/en/>

Remote

FULL STACK DEVELOPMENT Udemy Course

- React.js
- Node.js
- REST API
- MySQL / PostgreSQL
- JQuery

LANGUAGE SKILLS

Mother tongue(s): **ALBANIAN**

Other language(s):

	UNDERSTANDING		SPEAKING		WRITING
	Listening	Reading	Spoken production	Spoken interaction	
ENGLISH	B2	B2	B2	B2	B1
ITALIAN	B1	B1	B1	B1	B1

Levels: A1 and A2: Basic user; B1 and B2: Independent user; C1 and C2: Proficient user

SKILLS

Digital Skills

ReactJs | Typescript | AWS | VUE 3 | Jira | HTML & CSS | Microsoft Office | .NET | Java | Git | React Native | Web Development | GUI | Javascript(Nodejs, Expressjs)

Communication skills

Team working, adaptality, leading, organization, stress resistance and problem solving skills

DRIVING LICENCE

Driving Licence: B

PROJECTS

CURRENT

ChatdApp

ChatdApp is a mobile application developed in **React Native** with **TypeScript**, designed to provide a centralized solution for managing and monitoring vehicle fleets. The goal of the project was to combine several technical systems—such as **GPS tracking**, **M2M SIM card management**, and device identification through **QR code scanning**—into a single, stable, secure, and user-friendly platform. I built a complete authentication system where users can log in using email and password, with all sensitive data stored securely through encrypted storage. The application manages **JWT tokens** automatically, including token refreshing, and keeps the user session active without requiring frequent logins. I used the **Context API** combined with custom hooks, providing a clear separation between logic and interface. For API communication, I implemented a dedicated service layer using **Axios** with interceptors to handle authentication, errors, retries, and seamless token refresh.

CURRENT

Office Management System

The Office Management System is a comprehensive web application built with **Vue 3 and TypeScript**, designed to streamline and centralize a wide range of office operations. The platform integrates several essential business modules including administration, warehouse management, finance, cash flow, GPS synchronization, and internal communication tools. Its purpose is to provide companies with a unified digital ecosystem that simplifies daily processes, improves transparency, and enhances overall operational efficiency.

The application is developed using modern technologies such as Vue 3 with the **Composition API**, Pinia for state management, Vue Router for navigation, Axios for API communication, and Vuetify3 as the UI framework. At the core of the system is the Administration module, which handles the management of clients, companies, users, roles, permissions, projects, currencies, categories, suppliers, and project-specific roles. Authentication is implemented using JWT access and refresh tokens, combined with secure local storage and route guards to protect restricted pages. The Warehouse module enables businesses to manage equipment, track inventory status, register new items, update equipment conditions, and assign devices to clients. It provides a clear overview of warehouse operations and ensures accurate tracking of all physical assets.

.NET Calculator program

This is a Windows Forms app that creates a Simple Arithmetic Calculator UI app using .NET and C#. There is a button for numbers and operators. Just run the program, select your numbers and operators and run it.
